This year's study of the "Coface CEE Top 500" presents an even more heterogeneous picture of the countries in Central and Eastern Europe, each of which experienced and dealt with the impact of the crisis in the Eurozone in different ways.

The CEE Top 500 lists the 500 biggest companies in the region in terms of turnover. The flagships in CEE increased their turnover by 5% in 2012. The more difficult economic environment is reflected in the development of net profit. Only six out of the analysed 18 sectors increased their net profit. Transport and food are among them, with an increase of 119% and 22% respectively. The sharpest loss in numbers was faced by the oil and gas, energy supply and mining sectors, but in relation to last year, construction is the biggest loser, down 129%. This underlines that the region was and still is affected by the economic situation in Europe.

Despite this, the CEE Top 500 companies remain an important driving force in terms of employment. They employ 4% of the total workforce in the region. Employment trends vary between countries and sectors. Unemployment rates exploded in most CEE countries during the crisis. In some countries, like those in the Baltic region, there is evidence of a turnaround. The CEE Top 500 increased staff by 1.5% in 2012. This is only a small increase, but may point in the right direction.

CEE Top 500 companies increase turnover even in a difficult economic environment

The fifth edition of our study on the TOP 500 companies in Central Europe shows a diverse picture. Most of the countries in Central Europe are increasingly affected by the ongoing crisis in the Eurozone and having to contend with both a decrease or at least a slowdown in GDP growth and high unemployment rates. In 2012, the general view of the economy of Central Europe was less favourable. Compared to 2011, the insolvency rate almost tripled. A further increase is expected in 2013.

With our study, we want to answer the question: Can emerging Europe remain the driving force? Is "too big to fail" yesterday's news even there? Our study aims to provide some answers to these and other questions.

Coface started its activities in this region with the economic transformation in 1990, with the aim of helping companies to mitigate their risk and become important business partners for Europe. Since then we have been the market leader in business information and made it our mission to closely monitor the development of these important markets. We invite you to read our newest study and to keep up to date on the Top 500 companies in Central Europe.

Methodology of the Study

The CEE Top 500 is a joint project by the Coface offices in Central and Eastern Europe.

This ranking covers the largest companies in the region – based on the turnover for the 2012 calendar year – and was prepared in 2012 for the fifth time. The study includes the following countries:

Bulgaria • Croatia • Czech Republic • Estonia • Hungary • Latvia • Lithuania • Poland • Romania • Serbia • Slovakia • Slovenia • Ukraine

The largest companies in each of the above countries (turnover \geq EUR 120 million) were identified, excluding

financial service providers such as banks, insurance companies, leasing firms and brokers. In addition to revenues, the CEE Top 500 includes other key corporate indicators, e.g. net profits, the number of employees and the respective changes in relation to the previous year.

Turnover and profit were converted into EUR based on the exchange rate at the end of 2012. The data were taken from our databases and supplemented with external information as required.

The ranking does not include companies that declined or failed to provide financial results by the time the CEE Top 500 list was finalised.

CEE Top 500 Analysis

2012 WAS A TURBULENT YEAR FOR OUR FLAGSHIPS IN CEE. WORLDWIDE GROWTH SLOWEDANDAFFECTEDPROFITSNEGATIVELY.

More turnover, but a sharp decline in profit

Despite the economic crisis, the Top 500 players in the region increased turnover by 5% to over 628 billion EUR in 2012. However, this performance did not lead to a stable development in net profits. Whereas in 2011 the top companies of CEE improved their profits, they declined by almost 32% from 30 billion EUR to 20 billion EUR in 2012. The decrease can be explained by the decline in the oil and gas, energy supply, mining and construction sectors.

Major players again come from Poland, which has 171 companies in the field, followed by Hungary with 66 and Romania with 54. Ukrainian companies performed the worst: 28 dropped out of the Top 500, leaving the country in fourth position overall. 13% of all companies were newcomers in 2012. 63% or 316 companies improved their position and 113 (23%) ended with a worse position than 2011. Only eight companies remained where they were. Almost 8% of the Top 500 companies in CEE reported a continuous net loss in the last three years. This may pose a potential risk for business partners as the past proved that no company is too big to fail. As a leading credit insurer and market leader in business information in CEE, Coface has the expertise to mitigate your risks when doing business in the region.

Top 10 companies - Hardly any changes at the top

The Top 10 in CEE is again dominated by the energy industry (oil & gas and energy supply) and businesses based in Poland. The names of most of the largest companies are well known from previous years.

PKN ORLEN defends its pole position for the fifth time in a row thanks to a 12.3% increase in turnover (29,485 million EUR in total). There are no differences in second place either: Hungarian MOL, an oil and gas company, holds this position with an increase of 3.4% (18,776 million EUR). The companies in third and fourth place switched position. Czech car producer Škoda occupies the final place on the podium with a turnover of 9,507 million EUR. The difficult situation

on the gas market led to a decrease in the turnover (-9.8%) of Ukraine's NaftoGaz, putting it in fourth place. NaftoGaz is the only company with a net loss (-950.9 million EUR) within the Top 10.

The Czech energy supplier ČEZ is new in this year's Top 10 due to the reporting of consolidated figures. It therefore improved its position from number 18 up to number 5. The Polish oil and gas company Grupa Lotos remains 6th as in the previous year. It reported an increase in turnover of 13.2% (8,128 million EUR) and an impressive increase of 42.1% in terms of net profit (226 million EUR).

Another Ukrainian company, public energy supplier Energorynok, fell two places to end in seventh position. While turnover amounted to 7,795 million EUR, which is a positive change of 16.4%, net profit fell sharply by 95.6% to 4 million EUR. A further downgrade took place at PGE Polska Grupa Energetyczna (PGE), which moved from seventh to eighth place with turnover of 7,501 million EUR and net profit of 793 million EUR, a fall of 34.4%. Polish Jeronimo Martins improved its position (9th) with turnover of 7,096 million EUR. Poslkie Gornictwo Naftowe i Gazownictwo (PGNig), a Polish oil and gas company, also delivered an impressive improvement and moved into the Top 10 with a 24.9% increase in turnover (7,053 million EUR).

Newcomers, top movers and losers within the CEE Top 500 ranking

Let's have a detailed look at what happened in the ranking compared to the previous year. 59 companies are listed in 2012 for the first time.

The highest new entry was achieved by Volkswagen Group Polska in position 111, closely followed by Toyota Peugeot Citroen Automobile Czech in 112 and, a bit further down, Mobis Slovakia in 181. All three companies are related to the automotive business. In total 22% of all newcomers are from this sector.

Ten newly listed companies operate in the food industry and seven in wholesale. These three sectors provide more than half of all new entries.

Coface CEE Top 500:

Sources: National Statistical Offices. Coface.

What about movements within the ranking?

The highest rise - from 492 to 167 - was achieved by Electrica Furnizare, the Romanian public energy provider, which was created in 2011 through the merger of three regional branches of Electrica SA. In 2012, the company consolidated its position by completing the reorganisation of energy supply activities and upgrading the energy supply network. abka Polska, a Polish chain of convenience stores, was able to boost their performance and reached the 224th place in 2012, even beating their ranking in 2010 when they finished in 285th place.

The biggest loser in terms of position is the Polish Emperia Holding, dropping for the third year in a row from 87 in 2010 to 397 in 2012. The reason for this sharp drop is the sale of a few companies of the group. The Hungarian Philips Group is also steadily dropping down the ranking from 30th in 2010 to 295th in 2012.

This downturn is due to a nosedive in terms of turnover. It decreased by more than 69% for both companies. The third big loser is Eurovia CS from the Czech Republic, falling by 150 places to 468th position.

An outstanding winner in terms of the growth in turnover is the previously mentioned Volkswagen Group Polska. This incredible increase of more than 2000% is due to the acquisition of three companies: Skoda Auto Polska S.A., Kulczyk Tradex (importer of Volkswagen, Audi, Porsche) and KPI Business (importer and dealer of Volkswagen, Audi, Porsche). Another outstanding rise in turnover of nearly 650% was recorded by Mercedes-Benz Manufacturing in Hungary, and by Ford in Romania, with an increase of more than 210%. Ford started producing a new car model (B-Max) at its Romanian factory located in Craiova, increasing sales both to the domestic market, but in particular for export.

THE CENTRAL AND EASTERN EUROPEAN COUNTRIES ARE MORE HETEROGENEOUS WHILE SOME ARE THAN EVER: STILL STRUGGLING WITH RECESSION AND NEGATIVE **GDP GROWTH RATES. OTHERS ARE REPORTING** STABLE ECONOMIC GROWTH. GDP PER CAPITA RANGES BETWEEN JUST BELOW 3,000 EUR IN UKRAINE TO OVER 17,000 IN SLOVENIA - NOT TO MENTION THE DIFFERENCE IN COUNTRY SIZE AND POPULATION.

Top 3 countries

Poland - pole position again!

After recording the strongest growth in Europe in 2011, the economic crisis finally reached Poland in 2012. Growth slowed and insolvencies hit record levels. From 2011 to 2012 the total number rose from 723 to 877 (21.3%). This sharp increase will continue in 2013.

Nevertheless, Poland holds its pole position for the fifth time and is presented with 171 companies and a turnover of 234 billion EUR in the CEE Top 500. This is an increase of 6% compared to the previous year. In terms of the share of companies, the country closed in on the levels of 2011 (159) and 2010 (160). Despite a loss of 30%, Polish companies remain at the top in terms of net profit. The decrease from 12,014 million EUR to 8,460 million EUR can be explained by the losses in mining and construction industry. Mining companies like Katowicki Holding Weglowy S.A. recorded a drop in net profit of more than 80%.

Poland defended first place regarding employees: employment rose slightly from 1,039,541 to 1,045,144 (+0.5%). Overall, 6.7% of all employees work in the Polish companies of the CEE Top 500.

Hungary - a step closer to the top

Weak performance in the Eurozone led to a slowdown in emerging and open economies. This is one of the reasons why the performance of the Hungarian economy (GDP) dropped by 1.7%. The number of insolvencies increased by 12% in 2012 and is still high. This development did not stop the biggest companies in the country: Hungary moved up another place to secure second position in the assessment, although with a significant difference to Poland. With 66 companies and a turnover of 90 billion EUR (+2.2%)

the country is ranked second in both categories (number of companies and turnover). Like in recent years the net profit is declining (-27.5%) but Hungary still occupies the second rank. 5.3% of the Hungarian labour force works for one of the top companies in the country.

Romania - a newcomer in the Top 3

For the first time, Romania kicked Ukraine off the podium and catapulted from fifth to third place. This can be explained by a 22.7% increase in the number of companies to a total of 54.

Despite the higher number of companies within the Top 500, turnover was weak, leaving Romania in fifth place (48,559 million EUR, +10.8%). It is also ranked fifth in terms of net profit (+37.7%). Furthermore,

The CEE Top 500 as employers

When it comes to employment the CEE Top 500 play an important role in the region. 4% of the total labour force works for one of them. Lithuanian companies stand out here as they employ more than 10% of the working population in the country. This is an increase of 2.8% compared to the previous year. Nearly 7% of the labour force work for leading Polish enterprises, representing an increase of 0.6%, followed by Hungary with a stable share of more than 5%.

In general, positive signs can be discerned for employment in CEE Top 500 companies. In total, headcounts rose by 1.5% compared to last year. This constitutes only a small increase, but may point into the right direction. The recruitment strategy of the Top 500 companies seems to be having an impact on the countries' unemployment rates. High release rates go hand in hand with an increasing unemployment rate. Unemployment rose in six countries in 2012. At the same time, the Top 500 companies decreased staff in those countries (with the exception of Poland).

Unemployment rates exploded in most CEE countries during the crisis. Worst affected was the Balkan region, where some countries still show unemployment rates above 20%. The development of employment figures at top companies in Serbia, Slovenia and Croatia reflects this situation and cannot provide a positive outlook for the region. The Baltic States seem to have overcome the crisis on the labour market. Unemployment rates decreased constantly since peaking in 2010. Leading Baltic companies are now hiring again, leaving Latvia with one of the highest increases in employment (+9.1%). The economic problems in Bulgaria left their traces as employment at the companies listed in the ranking fell by more than 24% and the unemployment rate rose.

In only two countries did the unemployment rate remain stable. Hungary still reports a high 10.9% and leading Hungarian companies increased staff by 2.1%. Romania holds a special position with a stable but medium-high unemployment rate (6.5%). Romanian Top 500 companies increased staff by 14%.

Romania occupies eleventh place with regard to the total number of employees in these companies, which employ 2% of all workers in the country.

After a modest recovery in 2011 driven by exports and exceptional harvests, activity slowed in 2012. Exports, 50% of which go to the Eurozone, contracted. Inflation began to rise again in late 2012, due to rocketing agricultural prices. The effect is expected to continue until September 2013. Moreover, the number of insolvencies increased considerably compared to 2011. The need for external financing (20% of GDP) remained high in 2012 due to the persistent current account deficit and the scale of external debt repayment, the outstanding balance of which amounts to over 70% of GDP.

/CEE Top 500 - Sector Analysis

THE OIL AND GAS SECTOR AGAIN CONTRIBUTES MOST OF THE COMPANIES IN THE COFACE CEE TOP 500 RANKING. 65 COMPANIES GENERATED **TURNOVER TOTALLING 162** BILLION EUR. Α THE SECOND PLACED ENERGY SUPPLIERS (51 COMPANIES) DON'T EVEN ACHIEVE A TURNOVER HALF THIS SIZE (76 BILLION EUR). THE LAST ONE ON THE PODIUM IS THE AUTOMOTIVE SECTOR WITH 42 COMPANIES AND A TURNOVER OF 63 BILLION EUR, FOLLOWED BY RETAIL (41, TURNOVER OF 38 BILLION EUR) AND WHOLESALE (40, 42 BILLION EUR). THE BIGGEST INCREASES IN TURNOVER WERE **REPORTED BY THE CAR DISTRIBUTION BUSINESSES** (+41%), FOOD INDUSTRY AND WHOLESALE (14%). CONSTRUCTION, ELECTRONICS, METAL ONLY INDUSTRY, MINING AND TELECOMMUNICATIONS DECREASED TURNOVER WITHIN THE TOP 500 RANKING.

Top 3 sectors

Oil and gas

Ranked by both turnover and number of companies, the oil and gas sector leads the sector ranking. Nevertheless, the 65 oil- and gas giants in CEE had a difficult year in 2012. Turnover increased by 6%, but the overall net profit shrank from over 5 billion EUR to 3.3 billion EUR (-34.6%). The number of employees in the sector also declined by -4.7%. Oil and gas companies occupy only seventh place when ranked by staff number.

The importance of this sector was already shown in the company and country analysis. In every country, oil and gas utilities are amongst the leading companies with PKN Orlen (Poland) being Number 1 in CEE. In eight out of 13 countries, the oil and gas business is Number 1 in terms of turnover with Poland, Hungary and Romania contributing the biggest share. The average turnover growth rate was 5.9%. Only oil and gas companies in Croatia (-1%), Slovakia (-2.6%) and Ukraine (-7.4%) showed negative growth rates, but the average return on revenue (2%) in the sector was lower than for all CEE Top 500 companies (3.8%).

Ukrainian companies within this sector faced a difficult year. Three out of the five companies with the highest net loss in the sector are Ukrainian: NaftoGaz of Ukraine (-951 million EUR), Ukrtatnafta (-115 million EUR) and Avdiivka Cokery Plant (-105 million EUR). The highest decrease in turnover in absolute figures was recorded by three gas companies: NaftoGaz of Ukraine (-1 billion

Coface CEE Top 500: Number of Top 500 companies by industry and their revenues in 201

EUR), Slovenský Plynárenský Priemysel a. s., a Slovakian gas supplier (-541 million EUR) and the Hungarian gas company PANRUSGÁZ Gázkereskedelmi Zrt. (-346 million EUR). Record high gas prices hit the sector hard in 2012.

Energy supply

Over 76 billion EUR (+12%) in turnover generated by 51 companies places energy supply second in the sectoral ranking. Once again, Polish energy suppliers contribute the biggest share (nine companies). Although the average turnover growth rate is quite promising (+11%), in some countries the top players faced a more difficult economic environment. Energy demand was reduced due the recession. Net profit decreased by 32%, but the return on revenue is still above average (4.9%). The energy supply sector is one of the biggest employers (forth highest staff figure). The companies within the CEE Top 500 increased their workforce by over 28% to 253,200 in 2012.

Automotive

The automotive sector succeeded in getting into our Top 3 this year (2011: 4th position). 42 companies earned almost 63 billion EUR in turnover. Unsurprisingly, the biggest share (almost 35 billion EUR) comes from companies in the Czech Republic and Slovakia. Those countries are home to multinational players like Skoda Auto A.S., Volkswagen Slovakia, KIA Motors, to mention only a few. The cluster situated in West Slovakia, Eastern and Central Czech Republic, Southern Poland and Northern Hungary accounts for most companies. The average turnover growth rate was 26.6%. Mercedes-Benz Manufacturing Hungary, part of a production network of Mercedes-Benz compact cars, and Ford Romania reported the highest rates in this sector and are among the top performers of this study.

Although net profit declined by almost 7%, the companies in this sector employed an additional 6,500 people (+5.8%). The sector's return on revenue (2.9%) lies below average.

Employment by sectors

When ranked by number of employees, the so-called "Others" sector, which includes holding companies, is the biggest. Over 300,000 people work within this sector. Second comes transport with almost 295,000 employees (-2%) and third retail, which increased staff to over 277,000 (+6.8%). Although overall hiring of staff was modest (+1.5%), there are huge differences between the sectors. Energy suppliers increased staff considerably in 2012. Almost

60,000 people found a job in one of the top energy businesses in CEE (+28.4%) – despite the overall reduction in net profit. A similar picture was shown by the pharmaceutical industry. Net profit declined by 9%, but staff increased by 12.1%.

Telecommunication companies (-12.9%), service station operators (-11.1%) and the construction sector (-8%) released most people within the CEE Top 500.

Flop sectors

Construction is traditionally worst affected by economic downturn. It suffered from austerity programmes and a lack of investment in private housing. Only seven companies in this sector are represented in this study – four with an even worse ranking than 2011. They earned 6,116 million EUR in turnover (-9%). The whole sector ended with an overall net loss of 207 million EUR. In 2012, more than 3,000 people lost their jobs (-8%).

The serious situation of construction is also reflected in the biggest insolvencies in CEE. Among the biggest five insolvencies in Poland 2012, there were three construction companies: PBG S.A. (414 million EUR in liabilities, 393 employees), Hydrobudowa Polska S.A. (182 million EUR, 920 employees) and Poldim S.A. (39 million EUR, 550 employees). The second biggest insolvency in Romania was Confort SA (93 million EUR) with 956 employees concerned.

At least one of the biggest insolvencies in Slovenia, Ukraine, Lithuania, Latvia and Croatia also concerned a construction company.

The year 2012 was difficult for companies in the steel sector due to the worldwide decrease in prices. European demand for steel fell by almost 9%. Overall turnover declined by 5% to 43 billion EUR for the metal industry. This outcome can mainly be traced to the difficulties of Ukrainian companies contributing 14.2 billion EUR to the overall turnover. Net profit turned negative in 2012 (from 884 to -623 million EUR). Only twelve out of 35 companies reported growth in turnover in 2012.

Although the electronics sector is represented with 20 companies (rank 13), it showed the second highest decrease in turnover (-6% to 22.4 billion EUR). Net profit declined to 343 million EUR (-31%) compared to 2011. 7.1% of staff was released in 2012.

The car distribution business is presented with only seven companies within the Top 500. Turnover was lower than in the construction industry. But in contrast, this sector increased turnover enormously by 41% to almost 5 billion EUR.

Another negatively affected sector is that of service station operators. Whereas turnover grew by 6% to just over 3 billion EUR, the sector still showed a net loss (-34 million EUR) and has released 11.1% of its staff.

Katarzyna Kompowska Executive Manager Coface Central Europe

Even for the emerging part of Europe, 2012 and 2013 have been difficult years. But the analysis of the Top 500 companies illustrates that even in troubled economic times, potential for growth is there. The CEE flagships increased their turnover by 5% and demonstrated their importance not only within the region, but also for Europe and their main trading countries abroad.

That times have become more difficult for all economies, and hence also for emerging markets, is reflected in the sharp drop of 32% in profit, mostly triggered by the sectors of oil & gas, energy suppliers and mining, which together account for one third of the decline.

The Top 500 companies are an important force as employers, still hiring despite difficult times. 2.6 million people work for the CEE Top 500, which represents 4% of all working people in the region.

We will continue to monitor developments in emerging Europe. As a strong and promising region for economic progress in Europe, it's essential to keep an eye on the business opportunities available there. Coface is your best partner for finding ideal solutions to fruitful business relations and safer trading.

Jacek Krawiec

President of PKN ORLEN

1ST PLACE

"It is very encouraging that we have maintained our leading position in the ranking of the largest companies in the Central European economy. All the more so that we have uninterruptedly been the leaders of this listing since its first edition. In light of the still unstable environment in which the Corporation and the whole of the European economy are operating, it can be clearly seen that our market position is based on sound foundations. The efforts made in recent years to reduce the Corporation's excessive debt and at the same time the clear strategic directions of development are enabling us to look optimistically to the future and think about the further growth in value of the ORLEN Group."

Winfried Vahland Chairman of the Board, Škoda Auto

3RD PLACE

"ŠKODA AUTO is one of the world's longest-established automobile manufacturers. ŠKODA is a powerful brand and at the moment, we are in the middle of the most comprehensive model campaign in the company's history. We are expanding and renewing our model range with cars that stand for space, quality, functionality, timelessly elegant design and 'Simply Clever' features. The goal of our Growth Strategy is to sell at least 1.5 million ŠKODA cars per year worldwide by 2018. Over the next few years, we will be introducing a new or revised vehicle onto the market on average every six months."

Gabriele Düker Risk Underwriting Director Coface Central Europe

Given the economic situation, risk management and the focus on the most important asset in the balance sheet – the receivables – are essential. Coface therefore implemented the "Closer to the risk" organisation: Underwriting close to the risk allows for strong responsiveness in monitoring activity sectors, and as such improves the quality of our decisions.

Our local underwriters can fully apply their knowledge of the domestic markets and are able to strengthen their skills in their domestic market by underwriting for all of the Group's insured in their country.

4[™] PLACE

Evgen Bakulin

Chairman of the National Joint Stock Company NaftoGaz of Ukraine

"NaftoGaz of Ukraine, founded in 1998, is the leading fuel and energy complex in Ukraine. It is an associate member of the EuroGaz Gas Industry, member of the International Gas Union, Gas Center of the UN Economic Commission for Europe and the European Energy Forum. The Company provides approximately 90% of the gas, gas condensate and oil production volumes in Ukraine, and the purchases of natural gas for Ukrainian consumers. 54% (data of 2012) of natural gas export supplies from Russia to the European energy market, along with Russian oil transit to European countries. The Company implements a range of commercial projects for hydrocarbon production abroad. The goal of the state holding company foundation was to provide the oil and gas industry with efficient operation and to strengthen the role of Ukraine as an important link in European energy security."

5TH PLACE Daniel BenešCEO and Chairman of the

Board of Directors of ČEZ, a.s.

"We continue to aim at maximising value for our shareholders, despite uncertain conditions in the European power industry. We approach the economic crisis as a challenge that motivates us to achieve better performance and search for new synergetic activities. One of them is a launch of mobile virtual network operator during the autumn 2013. In the coming period, we will focus on modernizing and developing production resources, investing in distribution networks, and maintaining our first-class customer service. Innovations, hard work and constant improvement are the key factors of our success."

Sergiy Bedin Director of state-owned Enterprise Energorynok

7TH PLACE

electricity market in Ukraine. On 1st July 2013, the company

celebrated 13 years of business. We continue to work successfully on improving the existing energy market model with its 350 members. Adoption by Verkhovna Rada, Ukraine's energy market authority, gives us assurance about the further modernisation of the electricity market and market structures. Taking into account the intelligent potential of Energorynok's employees, our many years of experience and manufacturing capabilities, we hope that our enterprise will secure its well-deserved place and perform new duties for the new model of the energy market."

Christian Berger Country Manager Coface Austria

The impacts of the economic crisis are being severely felt in the countries of Central Europe. Insolvency figures and rates are on the rise. In total, insolvencies in Central Europe increased by 3.5% in 2012, although with varying trends in the different countries: Bulgaria and Croatia performed the worst.

Central and Eastern Europe has never been one market or a homogeneous region. Today, the countries differ even more: while some countries like the Czech Republic were highly affected by the recession of the Eurozone, others like Estonia presented a considerable positive growth rate.

When looking at Austria's external trade relations, the CEE region is ranked second after Germany. As the study shows, however, the variety across all the countries and a wide range of strong companies in various sectors underline its importance as a trading partner.

9TH PLACE

Tomasz Suchański CEO of the "Biedronka" chain of stores

"Being ranked among the top ten CEE companies is a source of satisfaction for us, particularly considering the slowdown experienced recently by the Polish economy. The present situation poses many challenges to European business, most importantly the creation of new jobs and the assurance of employment stability. I am therefore all the more pleased that the dynamic development of JMP and of the Biedronka chain – which will operate 3000 stores in 2015 – is also allowing us to have a positive impact on Poland's labour market. What matters is that we grow together with Polish producers, whose products make up over 90% of our offer."

FOLLOWING PAGES PRESENT THE AN **ECONOMIC** OUTLOOK OF THE CEE COUNTRIES. OVERALL, THE CEE REGION IS GOING THROUGH A PERIOD OF STUTTERING GROWTH, WITH AN ANNUAL **AVERAGE** INCREASE OF 1.2% COMPARED TO 5% IN **EMERGING MARKETS.**

Bulgaria

Overall Bulgaria presented a thoroughly positive picture of the national economy: Growth remained positive thanks to private consumption and the unemployment rate is still dropping. Nevertheless, the Eurozone recession also affected Bulgaria. Due to the low demand from the main export partners Germany, Romania and Turkey, the demand for Bulgarian products was weaker. Looking ahead to 2013/2014, a rise in foreign exchange reserves, which have already exceeded their historical level, can be expected. Weak exports, together with higher imports, will affect the current account balance, which will post a deficit in 2013.

Croatia

The general view of Croatia's economy is less favourable: GDP declined by 1.9% year-on-year in the third quarter of 2012. Depressed personal consumption and poor investments were the major factors behind the fall in overall activity, while only the positive contribution of net exports prevented an even gloomier record. The labour market situation was also particularly worrying. In spite of some fiscal consolidation efforts, the overall policy response seems to have been inadequate and the economy has remained vulnerable to potential shocks.

Czech Republic

The economy was highly affected by the recession in the Eurozone. A drop in GDP and productivity could be traced to the decrease in household consumption. Only foreign trade contributed positively to the GDP rate in 2012 (+1.55pp). The labour market recorded growth in employment as well as in the rate of unemployment. The cause was most likely also the shifts in types of employment (part-time jobs, contract jobs, helping family members, illicit work). Consumer inflation rose by 3.3% as a result of the growth in food prices and the cost of housing.

Estonia

Estonia took off with the highest growth rate in the region thanks to dynamic household consumption and investment which will continue to drive growth in 2013. The government's steps to support activity and to boost employment in 2011 have proved effective: while unemployment hit 20% of the economically active population in 2010, at the end of 2012 it amounted to less than 10%. Exports, especially capital goods, wood, textiles and chemical products will therefore benefit from the relatively good health of regional economies, namely Finland, Sweden, Russia and the Baltic countries, which tap 65% of exports. In 2013, this marked improvement will generate a renewed rise in household consumption facilitated by a real rise in salaries of 1.2%, of pensions of 1.8% and a revival in credit begun in 2012.

Latvia

Following a contraction in GDP or more than 20% over 2008/09, Latvia had the highest growth rate in Europe in 2011/12. The unemployment rate has undergone a significant drop, falling from more than 20% in 2010 to 13% in 2013. The rate of inflation is expected to increase slightly in 2013. Latvian exports will withstand the contraction in European activity. Latvia's main trading partners delivered the best economic performance in the economic region (Russia, Lithuania, Estonia, Germany and Sweden).

Lithuania

Havingexperiencedoneoftheworld'sbiggestcontractions in activity in 2009, Lithuania began an impressive recovery in 2011 thanks to a rebound in exports. However, growth sagged in 2012 due to weakening external demand and the rising cost of financing the external debt in the wake of the sovereign debt crisis in the Eurozone. Taking a look at 2013, consumption will support growth, but will be restrained by the banking sector's reluctance to grant credit to the private sector. Moreover, unemployment will remain high. Exports, particularly of capital goods, transport equipment, food products and chemicals will suffer from the slowdown in activity of the main European trading partners, i.e. Poland, Germany and the Baltic countries.

Poland

After recording the strongest growth in the EU in 2011, the economy slowed sharply in 2012. One of the main reasons is the decline in investment. The sharp European slowdown, combined with a set of government measures intended to reduce the public deficit has strongly affected the economy. Moreover, inflation reached 3.7%, which contributed to the depression of domestic demand. In 2013, European activity will remain sluggish. Consequently, the volume of Polish exports, largely directed towards Germany (25% of exports), is expected decrease. Inflation will diminish further in 2013 in connection with the fall in the oil price. The government will support growth through investment and a targeted stimulus policy. As armament is a priority, Poland is the only European country increasing its defence budget in 2013 (+7%).

Romania

Romania's economy looks back at mediocre economic years: After a modest recovery in 2011 driven by exports and exceptional harvests, activity slowed in 2012. Exports, 50% of which goes to the Eurozone in recession, contracted. The summer drought resulted in poor harvests (-20%) which cut GDP by 1.2%. Consequently, inflation began to rise again in late 2012, due to rocketing agricultural prices. Inflation is expected to top 5% until September 2013. Public sector wages rose 7.4% in December 2012, following an 8% increase in June. Consumption will also be driven by a fall in unemployment to 7%, below the EU average. The household consumption will drive growth in 2013 because of a rise in disposable income.

Serbia

The Serbian economy is expected to recover in 2013 after a sharper recession than expected in 2012, but will not achieve the government's 2% growth target. Growth will be underpinned by exports and higher output from the modernized refinery of the NIS oil company and from the mining sector (carbon, copper, gold). Meanwhile, persistently high unemployment will continue to curb household consumption. Inflation eased during the first half of 2012 in response to depressed domestic demand and prudent monetary policy, albeit constrained by the economy's dependence on the euro. Since then, inflation has started to rise again and is expected to settle above the Central Bank target in 2013.

Slovenia

The recession has a grip on Slovenia: the country went into recession in the second half of 2011. Activity contracted further in 2012 and will continue to shrink in 2013. The drivers of growth have been hit hard, domestically by the deleveraging plans of the government and private companies, and externally by the contraction in European activity. Furthermore, unemployment is rising and reached 12% in 2012 (6% in 2008). In 2013, growth will remain negative and private consumption will fall again due to government plans to cut the public deficit. The trade balance will support economic growth in 2013, but domestic demand will lead to a depressed import volume.

Slovakia

After growing well compared to its European neighbours in 2012, the Slovak Republic is expected to undergo a change and slow significantly. Exports represent 90% of GDP, making Slovakia the most open country in the Union. The slowdown in Western European consumption, particularly in Germany, is expected to affect business investments. However, Slovak businesses have the highest profitability levels in the EU, which means they will not have to make sharp spending cuts. Furthermore, the unemployment rate approached 13.5% in 2012 and is set to rise in 2013.

Ukraine

Ukraine entered into a recession in the second half of 2012 and real GDP growth was 0.2%. The global slowdown and lower demand for steel led to weak performance in industrial production. However, domestic demand improved (expansion of retail turnover by 13.7%) backed by an increase in real wages of 11.7%. The slowdown in exports and soaring imported gas prices contributed to the widening of the current account deficit in 2011 and 2012. The general economic situation was characterised by the lack of structural reforms and their efficient implementation.

Coface – Our offer in Central Europe

The Coface Group

Coface is a trade risk expert and a worldwide leader in credit insurance. It assists companies – regardless of their business sector, size or country – as they grow within their own country and those to which they export. The Group's strength is based on close to 70 years of experience, highly-experienced employees and a powerful international network able to market its services wherever our customers are.

Each quarter, Coface publishes its country risk assessments for 157 countries.

Coface - a pioneer in CEE

Coface covers seven regions worldwide. The headquarters for the Central European region are based in Vienna. With its twelve branches, Coface employs over 700 people in the region to cover the increasing demand of these fast growing market. The mix of local management and market knowledge and the network of expertise in risk management are unique in Central Europe. This allows a broad-based offering covering credit insurance, business information and collection services that makes Coface the risk management partner with the most extensive know-how of the region.

Our offer

Credit Insurance: to control your risk

Whether SMEs or major corporate groups, Coface is there by their side the world over. In what role? That of adviser and guide - supporting them and securing their transactions by protecting them against the risk of their clients defaulting. For our clients, choosing Coface means lining up the odds on their side for taking the right decisions and optimising their chances of success by protecting against the financial risks inherent in their business as early as possible.

Business Information: take acceptable risks

Non-payment risk prevention begins with gathering relevant and up-to-date information on buyers and their environment. The analysis of this information helps with decision-making. Our business information services offer a wide range of products.

Debt Collection: limit your losses

Debt collection is an essential facet of the risk management that Coface offers its clients. This activity requires a high level of legal expertise and a global talent network, which Coface has both through its own resources as well as those of its "CreditAlliance" partner network.

Our clients have access to our debt collection services for both their insured and uninsured invoices.
